75. Here are some ideas of things to do when studying for the final exam.

- Listen very carefully to your instructor with regards to preparing for and taking the final exam and do what your instructor suggests.
- Start early in studying for the final exam; do not wait until the last minute.
- Review all of the material for the final exam from your textbook, notebook, and any handouts from your instructor. Review previous tests, quizzes, and homework assignments.
- Check to see if your instructor or mathematics department will be conducting a review for the final exam.
- Check with your instructor to see whether they have a practice final exam or final exams from previous semesters that may be available to students for review.
- Use your previously taken exams as a practice final exam.
- Review concepts and definitions by reading the Chapter Highlights at the end of each chapter.
- Review any formulas that you may need to memorize.
- Practice working out exercises by completing the Chapter Review found at the end of each chapter and/or the latest Cumulative Review.
- It is important that you place yourself in conditions similar to test conditions to find out how you will perform. After you feel you know the material, take a sample final exam and do not use your notes or your textbook. Then check your sample exam and if you are not satisfied with the results, study the areas that you are weak in and try again.
- If you are unsure of some concepts, see your instructor or visit a learning lab for assistance. View the video segment of any troublesome sections.
- If you need further exercises to work, try the Cumulative Reviews at the end of the chapters.
- On the day of the final exam, allow yourself plenty of time to arrive at where you will be taking it.
